

FAST TESTER

BACKFLOW ASSEMBLY TESTING MOBILE WEB APP

Facility Assessment Survey Technology (FAST)

MTS is proud to announce **FAST TESTER** for managing annual backflow assembly test reports.

FAST TESTER is a standalone mobile web application that allows backflow assembly testers the ability to gather test data and submit electronic test reports to the water utility via their mobile phone or tablet (both Android and Apple iOS products). Utilities using the FAST Desktop Cross Connection Control Program can accept digital test reports with a few simple clicks. Testers can also email the PDF test reports to municipalities not using the FAST system (if acceptable).

Water Utility Administrators - **No longer have to enter illegible paper test reports.**

Customers – **Simplifies annual testing process.**

Testers – **No longer must fill out soggy test reports or track customer backflow assembly inventory.**

How does it work?

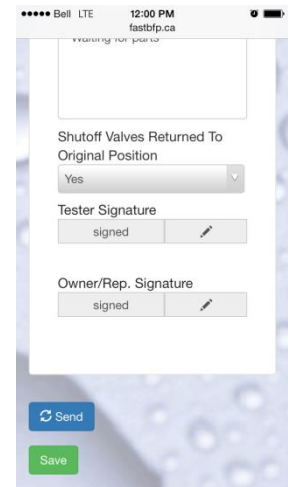

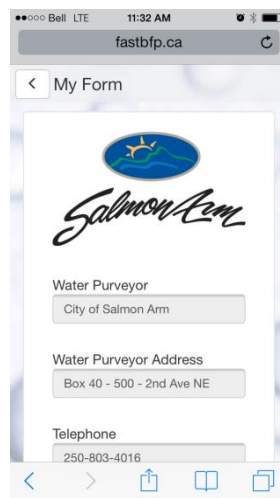

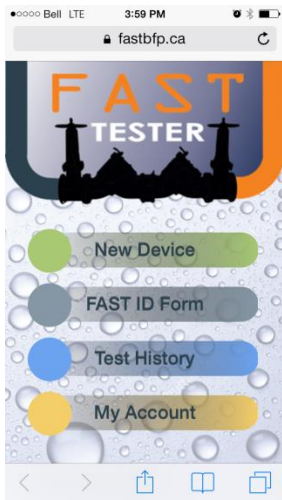

1. Testers register online (\$25.00 1st year then \$50.00 annual fee thereafter)
2. Municipalities email (or mail) annual BFP testing notifications to customers.
3. **Customers forward the testing notification to a backflow tester of their choice. (Testers can also be CC'd the annual notifications with customer approval.)**
4. Tester opens the attached PDF notice in the email from their mobile device and clicks on the FAST ID link for each device (or manually enters the device's unique FAST ID) that will automatically load an Electronic Test Report Form with all completed pertinent information for that device. Testers simply enter the test results. With a touch of a button the test form is submitted directly to the water utility.
5. The Water Utility CCC Program administrator immediately receives the test report.
6. A confirmation is sent back to the tester confirming the test report has been accepted.

The FAST Tester mobile web app can submit test reports to any water purveyor that is currently using the FAST Desktop program. Additional test report fees may apply for some municipalities.

Why use FAST Tester?

- Saves administrative time, money and is environmentally friendly!
- Testers must enter the test data accurately in order to submit the Test Report avoiding errors.
- Manages data for all removed and replaced backflow preventers to avoid inventory confusion.
- Saves Backflow Testers time, money and prevents confusion on site.
- Helps Backflow Testers manage existing customer backflow preventers (inventory, locations, annual test dates, gauge calibration dates, etc).

- Auto PASS / FAIL & buffer calculations.
- Email confirmation of sent and accepted test reports are tracked so no guesswork as to the status of the test reports.
- Tester & owner signatures can still be collected on the mobile device in real time.
- Testers can use FAST Tester throughout the province for other water utilities that use the FAST Desktop program.
- Testers can produce a PDF test report for customers or for submission to water suppliers not using the FAST Desktop program.
- FAST Backflow Assembly Test Tags are available to attach to the device for accurate field inspections
- Annual low-cost fee to Testers - **an introductory offer of \$25.00 annual fee is available now!**
 - ❖ **Some municipalities may collect test report submission administration fees similar to test report form fees! This will be indicated in the shopping cart prior to submitting the test report.**

Contact our office at 250-503-0893 or visit our website at <https://www.fastbfp.ca> for more details.

Visit <https://www.fastbfp.ca/mobile> on your mobile device to register now!

Each tester must use a unique email address. You will need a valid credit card, your BFP Tester certification number and your gauge calibration date to complete registration.
